

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: currentlystuck

Project / Product Name: codelens

Organization / Institution (if any): MSRIT

Submission Date: 30-09-2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes / No

Yes

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming chatgpt was used to brainstorm and ideate

Code generation or assistance Codex was used for code generation, implementation assistance, and development support.

UI / UX design ChatGPT and Codex were used to suggest UI/UX layouts, themes, color schemes, and interface improvements.

Content creation ChatGPT was used to assist with project documentation, README content, presentation content, and descriptions.

Data analysis Not Used

Testing / debugging Codex were used to identify errors, troubleshoot implementation issues, and assist with debugging.

Other AI was used for technical guidance and development workflow assistance.

4. Feature Origin Classification (Please add/delete based on the number of the feature)

Feature 1

1. Feature Name:

Repository-Based Code Search

2. Self-Generated/AI-Generated/Both: Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: "Build a code retrieval system that allows users to search a codebase using natural-language queries and return relevant code snippets."

Output Summary: AI assisted in designing and implementing the repository search workflow, including frontend-backend communication and search result handling.

Modification: The team defined the final workflow and requirements and modified the generated implementation to match the CodeLens architecture and UI.

Feature 2

1. Feature Name:

GitHub Repository Ingestion and Indexing

2. Self-Generated/AI-Generated/Both: Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: "Enable CodeLens to accept a new GitHub repository URL, clone the repository, index its source files, and make it available for code search."

Output Summary: AI assisted with implementing the repository cloning, indexing workflow, indexing status, and repository selection.

Modification: The team tested the workflow with new repositories, fixed errors, and modified the implementation to support arbitrary public GitHub repositories.

Feature 3

1. Feature Name:

Hybrid Code Retrieval

2. Self-Generated/AI-Generated/Both: Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: "Implement code retrieval using both semantic/vector search and lexical BM25 search, and combine the results using reciprocal rank fusion."

Output Summary: AI assisted with the implementation and integration of dense retrieval, BM25 retrieval, and result fusion.

Modification: The team integrated and tested the retrieval pipeline and adjusted the implementation according to the project requirements.

Feature 4

1. Feature Name:

AST-Aware Code Indexing

2. Self-Generated/AI-Generated/Both:

Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: "Use Tree-sitter to parse source code and create meaningful code chunks for retrieval instead of relying only on arbitrary text chunks."

Output Summary: AI assisted with the design and implementation of syntax-aware code parsing and chunking.

Modification: The team integrated the approach into the indexing pipeline and tested it with different repositories and source files.

Feature 5

1. Feature Name:

Repository and Version Selection

2. Self-Generated/AI-Generated/Both:

Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: "Add repository selection and version/commit selection so users can search specific indexed repositories and code versions."

Output Summary: AI assisted with the repository selector, version handling, API integration, and search filtering.

Modification: The team refined the interface and connected it to the actual indexing and search workflow.

Feature 6

1. Feature Name:

README Analysis and Suggested Questions

2. Self-Generated/AI-Generated/Both:
Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: “Analyze the selected repository README and display a concise summary, important modules, features, and suggested questions that users can use to explore the codebase.”

Output Summary: AI assisted with implementing README extraction, analysis, repository summaries, and suggested search questions.

Modification: The team refined the displayed information and UI so that suggested questions and repository summaries fit naturally into the CodeLens interface.

Feature 7

1. Feature Name:

CodeLens Developer UI/UX

2. Self-Generated/AI-Generated/Both:
Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: “Design a professional developer-tool interface for CodeLens with a dark IDE-style theme, clear repository information, search, recommended questions, and readable code results.”

Output Summary: AI generated UI/UX suggestions and implementation assistance for the CodeLens interface.

Modification: The team selected the final visual direction and modified the generated UI, including colors, layout, spacing, code presentation, and repository summary placement.

Feature 8

1. Feature Name:

Search Result Ranking and Code Inspection

2. Self-Generated/AI-Generated/Both:
Both

3. Description:

AI tools/platform used: ChatGPT and Codex

Prompt used: “Display retrieved code snippets with file path, line numbers, symbols, relevance information, and code content so developers can inspect search results.”

Output Summary: AI assisted with the result-card design and frontend/backend data mapping.

Modification: The team customized the result presentation and integrated it with the final CodeLens search experience.

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: Kriti Sehgal

Role: 

Signature: Frontend developer

Date: 30-09-2026
